# 1

*Questions*

**1. Within the expression -1 OR 5*5=25, why does -1 not affect the final TRUE outcome?**

A. -1 is always treated as false
B. 5*5=25 is the dominant condition
C. -1 is a true equivalent in logical operations
D. SQL ignores negative values in OR

**2. SQL expression evaluation: What does "" AND 25 result in?**

A. False, due to empty string evaluation
B. Syntax error in SQL operations
C. Null, due to type mismatch
D. True, since 25 is non-zero
