# (select 198766*667891 from DUAL)

*Questions*

**1. Why would a query like SELECT 198766*667891 be executed without specifying a table other than DUAL?**

A. To optimize the use of GROUP BY clauses
B. To ensure compatibility across all databases
C. As a way to create temporary tables
D. To perform a quick calculation without needing to access tables
