

# **(select 198766\*667891 from DUAL)**

## *Questions*

**1. Why would a query like `SELECT 198766*667891` be executed without specifying a table other than DUAL?**

- A. To optimize the use of GROUP BY clauses
- B. To ensure compatibility across all databases
- C. As a way to create temporary tables
- D. To perform a quick calculation without needing to access tables
